U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU

CLIMATOLOGICAL DATA

R. T. LINDLEY

VOL. XXXIX. VICKSBURG, MISS., JUNE, 1934. No. 6

GENERAL SUMMARY

The monthly mean temperature, 81°, exceeds the normal by slightly over 2° and has been exceeded in June but seven times since the beginning of our records for Mississippi, in 1888. In the northern counties, the highest temperature during the month generally was recorded during the period from the 25th to the 28th, with less uniformity observed in the southern division, as to time of occurrence. The lowest temperature during the month occurred at many southern stations near the beginning of the month, but was mostly recorded on the 14-15th in the northern division.

The monthly average precipitation for the State, 5.65 inches, exceeded the normal nearly an inch and one-half, exceeding other Mississippi records for June made during the last 47 years with six exceptions. The effect of a tropical hurricane, accompanied by heavy to excessive rain, was noted over western counties during the 16-18th. For the entire State, a measurable amount of precipitation was recorded on about one day in four during the month.

Numerous western localities suffered from excessive rain, especially about the 16-18th, and moisture was insufficient at times for the needs of vegetation over some eastern and extreme southern communities; in general, however, precipitation was fairly adequate to the need of growing crops during the month, the fields well cultivated and plant growth vigorous. Prevalent weather conditions mostly favored boll weevil propagation and activity.

No noteworthy damage from hail was reported during the month, but scattered localities suffered losses from the passage of thundersqualls and an extensive western area suffered severely from the passage of the tropical hurricane on the 16-18th, four deaths resulting therefrom and numerous injuries. Lightning damage was reported as follows: On the 2d, at Nettleton, Lee Co., $1,500; on the 3d, at Electric Mills, Kemper Co., $20,000; on the 29th, at Nettleton, barn burned, value not stated. Deaths from lightning:—one near Philadelphia, Neshoba Co., on the 2d; one at Muldrow, Oktibbeha Co., on the 3d; one near Kosciusko, Attala Co., on the 29th; two suffered serious injuries near West Point, on the 29th; also at West Point on the 2d, the passage of a thundersquall, attended by high wind and heavy rain, resulted in damage to mercantile establishments, with total damage estimated at $8 000.

TEMPERATURE

The monthly mean for the State, 51 stations reporting, was 81.0°, which is 2.2° above the average for the last 47 years.

The highest monthly mean was 83.4°, at Clarksdale.

The lowest monthly mean was 79.0°, at Pearlington.

The highest temperature was 103°, at Columbus on the 26th.

—The lowest temperature was 57°, at Holly Springs on the 13th, Duck Hill on the 14th, and Aberdeen on the 15th.

The greatest local monthly range was 45°, at Holly Springs.

The least local monthly range was 27°, at Biloxi.

The greatest daily range was 40°, at Batesville on the 1st.

PRECIPITATION

The monthly mean for the State, 63 stations reporting, was 5.65 inches, which is 1.48 inches above the average for the last 47 years.

The greatest monthly total was 11.44 inches, at Cleveland.

The least monthly total was 1.38 inches, at Bay St. Louis.

The greatest amount in any 24 consecutive hours was 7.07 inches, at Port Gibson on the 17th.

The average number of rainy days for the State was 8.

CLOUDINESS

The average number of clear days for the State was 16; partly cloudy, 10; cloudy, 4.

MISCELLANEOUS PHENOMENA

Light hail.—Reported at Biloxi and Magnolia on the 1st, and at West Point on the 2d.

Thunderstorms.—Reported on an average of about 12 days.

RIVERS

The heavy precipitation of the 16-18th caused the Pearl River to exceed flood stage by from one to three and one-half feet at points from Jackson to Monticello. Other intra-state streams traversing western counties exhibited a marked increase in stages subsequent to that time, but did not overflow.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all completed reports are used determining State means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing, for example, [a] represents one day, [b] two days, etc.

† Also on other dates. ‡‡ Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain, or melted snow.

‡‡Po-tsoffice addresses of these stations are as follows: Of Austin, Tunica; of Pearlington, Logtown; of Shellmound, Greenwood * Combined with Lake.
